

IN THE SPECIFICATION:

Please insert the following in the Summary of the Invention on page 2,
between lines 15 and 16:

--In one aspect, the invention is an apparatus having a communication function, comprising first switching means for switching between first and second stand-by modes in a stand-by state, and second switching means for switching between first and second communication modes for the communication function, wherein switching by the first switching means and switching by the second switching means are performed in cooperation with each other.

In another aspect, the invention is a method of controlling an apparatus having a communication function, comprising a first switching step of switching between first and second stand-by modes in a stand-by state, and a second switching step of switching between first and second communication modes for the communication function, wherein switching by the first switching step and switching by the second switching step are performed in cooperation with each other.

In yet another aspect, the invention is a storage medium storing a program for controlling an apparatus having a communication function, the program comprising a first switching step of switching between first and second stand-by modes in a stand-by state, and a second switching step of switching between first and second communication modes for the communication function, wherein switching by the first switching step and switching by the second switching step are performed in cooperation with each other.--
